

celcius makes your company's website sparkle!

Founded in 2001, Celcius is a mature Internet company that specializes in designing, building and managing commercial and business websites. Our team of experienced web designers and programmers bring their highly specialized graphics knowledge and a unique interpretation to every project. So you get a website that perfectly suits your needs.

How do we do this? By thinking along with you. By offering new possibilities. And by applying all the versatility of the Internet to your company. We combine your market knowledge with our technical expertise and creativity to communicate your message in the most effective and attention-grabbing way.

- Adobe Air

4 STEPS TO A GREAT WEBSITE

To ensure your website is of the highest quality, we apply these four criteria to every project.

1. Content

Content is king! Your content is the reason people visit your site.

So we build your entire site to match your content and present it in the best way possible.

2. Usability

To keep people coming back, your website needs to be easy to use for all your visitors – that includes providing a quick and clear route to all the information they need.

3. Functionality

We ensure your website has all the functionality and interactive features to deliver the ultimate user experience.

4. Design

You want your website to look good and reflect your company. We'll deliver a fresh, contemporary design that takes into account your existing corporate identity and branding.
